

ENVIRONMENTAL POLICY

Unifi, Inc. is committed to continuous improvement in sustainability in all of our operations. Our goal is to provide sustainable textile solutions to our customers while operating in an environmentally responsible manner.

Helping reduce solid waste generation and energy and water usage is the responsibility of all of our employees in our plants and facilities. We monitor our performance at each site, implement methods to reduce in each area, and review progress at the executive level. In 2012, these efforts allowed our domestic operations to become landfill free.

We strive to comply with all applicable national, regional, and local environmental regulations of the countries in which we operate.

We develop products using recycled materials to reduce our reliance upon oil-based raw materials. Our flagship brand REPVEVE®, is made from recycled materials, including plastic bottles. We examine all aspects of our operations to see how we can reduce, reuse, and recycle. We provide returnable packaging options and aim to use only the packaging materials necessary to deliver our products. We seek suppliers who share our drive to continuously improve the environmental impact of the supply chain.

Both internally and externally, we strive to educate and promote the importance and benefits of recycling. Our goal is to work with events, places and spaces to turn them green, using our REPVEVE product and color to drive recycling awareness.
